The “digital gap”

POSTDATA Vision is to ease humanists research through its digital transformation

Traditional Research

Counting syllables with fingers

Comparing 2-3 poems at the same time

Looking for similar evidences by reading all papers and books

Individual research

Digital Humanities

Automatic syllable counter

Comparing thousands of poems in parallel

Finding multiple evidences through one search engine

Collaborative, interdisciplinary research

POSTDATA

Poetry Standardization
and Linked Open Data

The three POSTDATA Axes

Semantic Infrastructure

Linked open data

Virtual Research Environment

Digital Scholarly Editing

Poetry Lab

Natural language processing

Challenge

Barriers

Project

Methodology

Impact

DOMAIN MODEL FOR EUROPEAN POETRY

POSTDATA

Poetry Standardization
and Linked Open Data

Western Literature

- There is not an ontological model for poetry
- It is necessary to standardize specific fields (rhyme, metrical scheme)
- It is necessary to map controlled vocabularies across different languages

DOMAIN MODEL FOR EUROPEAN POETRY

POSTDATA

Poetry Standardization
and Linked Open Data

But, what does define a POEM?

4	Estuans intrinsecus in amaritudine factus de materia folio sum similis,	ira vehementi loquor mee menti. levis elementi de quo ludunt venti.
8	Cum sit enim proprium supra petram ponere stultus ego comparor sub eodem aere	viro sapienti, sedem fundamenti, fluvio labenti, numquam permanenti.
12	Feror ego veluti ut per vias aeris non me tenent vincula, quero mei similes	sine nauta navis, vaga fertur avis; non me tenet clavis, et adiungor pravis.

Carmina Burana, 191

The puzzle of digital poetic repertoires

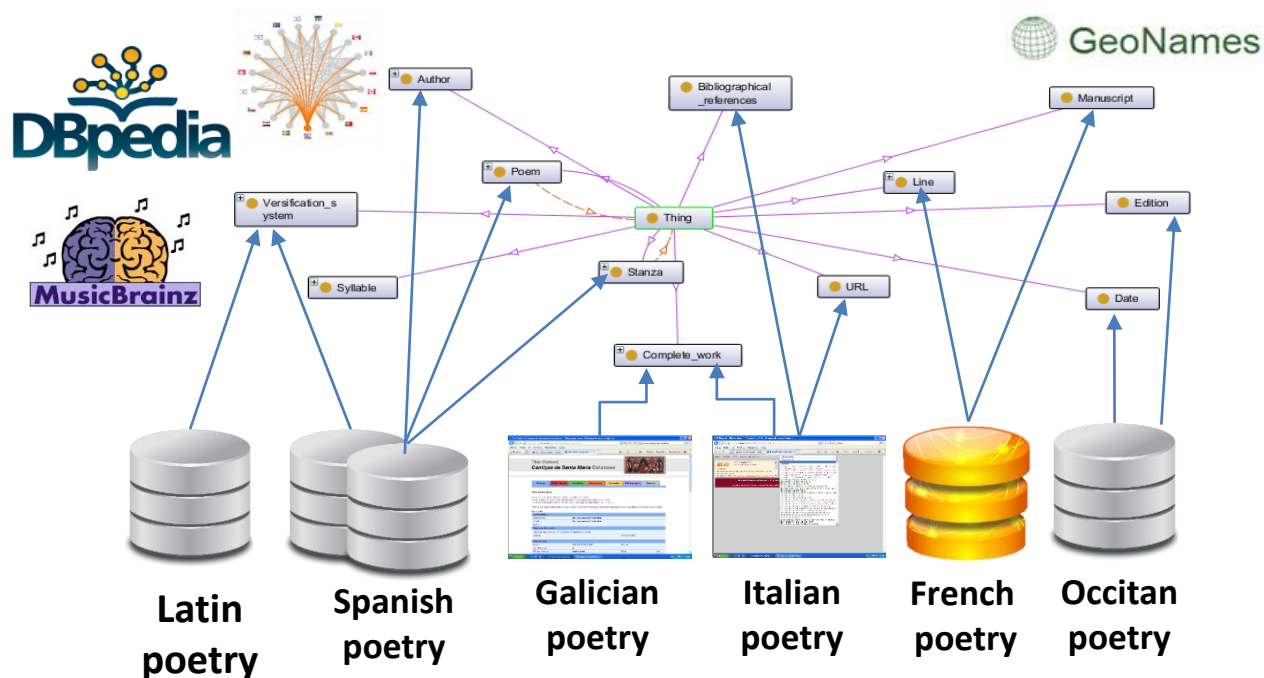

DOMAIN MODEL FOR EUROPEAN POETRY

POSTDATA

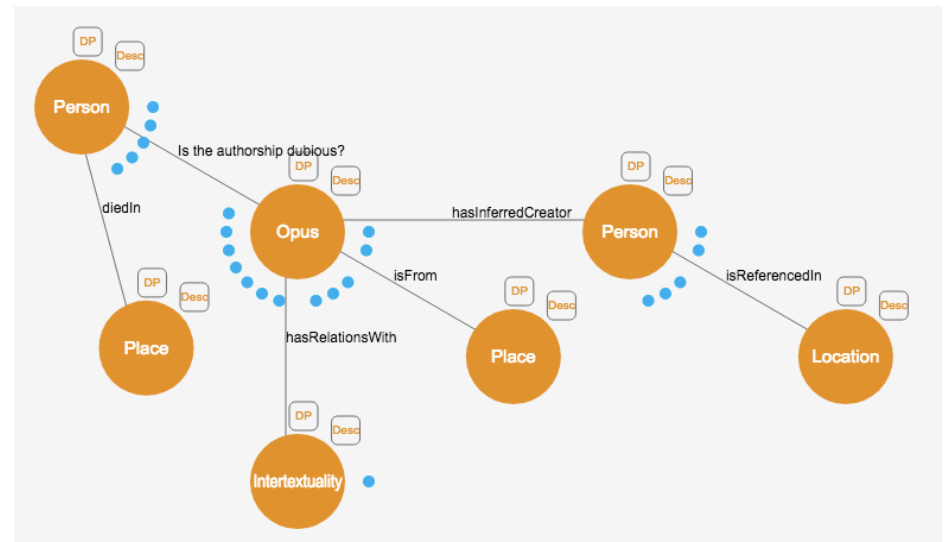

Poetry Standardization
and Linked Open Data

POSTDATA looks for an abstract model with common elements across the different poetic systems

DOMAIN MODEL FOR EUROPEAN POETRY

- DOMAIN MODEL FOR EUROPEAN POETRY
- key concepts:
 - standardisation and
 - interoperability
- The most advantageous paradigm
 - Linked Open Data

Poetry Lab : NLP tools

POSTDATA

Poetry Standardization
and Linked Open Data

- Tools for (automatic) poetry analysis
- Largely based on Natural Language Processing
- Insofar as literary phenomena in domain model rely on linguistic traits, NLP can help automate their annotation

Content analysis:

- Medieval Spanish Named Entity Recognition (Díez Platas et al., 2017)

Phonetics and metrics:

- Lexical Syllabification (prereq for scansion)

Other stylistic traits:

- Enjambment detection (Ruiz, Martínez et al., 2017)

Poetry Lab: Syllabification

- • A prerequisite for scansion
- • Syllable boundary detection + pos-tagging to determine stressability (weak vs. strong categories)

#	Text	1	2	3	4	5	6	7	8	9	10	11
1	Ya se doran las hojas, ya las tardes	Ya	se	do	ran	las	ho	jas	ya	las	tar	des
2	Son lo mejor del día	Son	lo	me	jor	del	dí	a				
3	Bajo su luz madura de sosiego,	Ba	jo	su	luz	ma	du	ra	de	so	sie	go

Poetry Lab: Enjambment

POSTDATA

Poetry Standardization
and Linked Open Data

- Mismatch between metrical and syntactic units
- Defined in syntactic terms
- Can be detected based on pos-tagging / parsing
- Definition/detection not trivial
- Previously unanalyzed with automatic means

Poetry Lab: Enjambment

POSTDATA

Poetry Standardization
and Linked Open Data

- Enjambment takes place when particularly cohesive syntactic units are broken up by a metrical pause (across lines or hemistichs)

- Example

1. Prefiero
2. quedarme **desnuda** //
3. **de amigo insincero**

1. I'd rather
2. be **naked** //
3. **of fake** friend

INTERPRETATIONS

- a) naked (no clothes)
- b) naked of fake friend (without such a person)

- Hispanic Medieval Tagger (Díez Platas et al., 2017)
- Medieval Spanish NERC
- Person, location, organization, role names
- Normalization of historical spellings
- Geolocalization
- TEI output

Poetry Lab: NERC
